1. Use-Cases Identification

The application revolves mainly around one actor, the actual users submitting and receiving the traffic alerts, but there can be a second actor, the admin, who can have access to the data on the servers and interact with it, such as edit the users' accounts.

Use case: Create account

Level: user-goal level

Primary actor: User

Main success scenario: The users inputs his desired username and password, thus creating an account with which he can then access the application's features.

Extensions: Optionally, a user can input an email address, being identifyable by that aswell, and additionally receiving a confirmation email.

**Use case: Submit traffic alert**

Level: user-goal level

Primary actor: User

Main success scenario: The users selects the type of alert he wishes to submit, presses the submit button and the alert is sent to the server.

Extensions: An optional message can be written

2. UML Use-Case Diagrams

2.1 Create account

2.2 Submit traffic alert
